It is estimated that as of August 2019, there are over 100 million AutoCAD users worldwide. AutoCAD is used by over 75,000 firms in more than 150 countries. AutoCAD is the number one CAD app used by architects, engineers, contractors, and other firms and organizations. AutoCAD History AutoCAD has evolved over the years since it first appeared. AutoCAD is a powerful, versatile, and well-established CAD app. It was originally launched on MS-DOS in 1982 by a team of engineers that originally included Harvey Feinberg. The AutoCAD app first shipped as the Deluxe Dimension System (DESD), which was designed as a desktop app for the DEC minicomputer. It was the first commercially available CAD app to use vector graphics. The first releases of AutoCAD relied heavily on the three-dimensional (3D) construct and design of models. AutoCAD was one of the first desktop CAD applications to use the concept of direct editing, where objects and their properties (dimensions, properties, etc.) are directly changed and moved in the model. This concept is similar to the way that word processing programs such as Word and LibreOffice work. The 3D concept was built upon and quickly became the model for subsequent releases of AutoCAD. In 1985, AutoCAD's first release was SC/55, which was eventually renamed to AutoCAD. In 1988, AutoCAD was rebranded to as "AutoCAD", and the first AutoCAD for Windows was released in 1989. In the next decade, there were also numerous releases of AutoCAD as a desktop app on both Windows and Macintosh OS platforms. AutoCAD became the number one CAD app used by architects, engineers, and other firms and organizations. In 1994, Autodesk introduced the AutoCAD Drawing Standard. AutoCAD Drawing Standard provided a consistent interface across various operating systems and devices, and it also provided the concept of layout automation. In the late 1990s, Autodesk adopted the concept of the 2D only 2.5D design, and the concept of a single 2D screen layout was introduced in the 2000 version of AutoCAD. Currently, the latest release of AutoCAD is AutoCAD 2020. The AutoCAD 2020 app is available on most current operating systems, including Windows, macOS, and Linux. AutoCAD 2020 was first released on November 1, 2019

AutoCAD allows specifying settings in the 'user preferences'. These settings can be modified using the UserPrefs file. Alternatively, AutoCAD allows settings to be accessed through the system preferences, through the 'Customize User Settings' dialog.
