Designers can use AutoCAD, a 2D CAD application that uses graphical user interfaces, to create 2D and 3D drawings. They can combine several layers (named drawing windows) on a canvas to create complex 2D models. AutoCAD is often used by architects, engineers, and civil, mechanical and electrical designers. It is often used to create architectural, mechanical, electrical and electrical diagrams of an item such as a bridge, home or car. The design team can generate and then create a graphical representation of an item. They can then overlay the item with sections of the building to obtain a whole-building or site-wide design and analysis. AutoCAD uses a hierarchical architecture. Most often it is used to create architectural models, but can also be used to design manufacturing processes. It is similar in design philosophy to the use of subroutines and functions in programming languages. Designers may also use AutoCAD to create 3D models. Most often, they will use AutoCAD for the 2D section of the 3D model. When the design is complete, they may use 3D modeling software for the 3D portion of the model. AutoCAD is used to create sections, drawings, and assembly drawings. It is available for most computer platforms, including PCs, Macs, Linux, and mainframe computers. AutoCAD can also be used as a drafting and design application for professional use. AutoCAD, like any other software, comes with lots of options. There are a number of standard ways to connect to the internet. For example, when you are signing up for a web service or logging on to a website, you have the option to provide your name, e-mail address, credit card number, and your password. If you do not want to provide your credit card number, simply uncheck the box that says "I want to provide my credit card number." You have the option of selecting your security settings to protect your login. To log in as a non-expert user, you may want to use "Public Security." You may also have the option to create your own password or use the default. In this case, you would be using "My Security Settings." To save time, you may choose the option to use the Autodesk Personal Network to login to AutoCAD. However, if you don't want to use the

Gallery: Rainbows over James Mountain Posted: Sat 10:40 PM, Jan 16, 2006 By JOELLEN COULTER, jcoult@thetelegram.com Local woman Delaine Kamey and her family were caught by surprise when they saw rainbow after rainbow after rainbow while visiting James Mountain. The family saw the color change from white to pink to red, and even more colors. "It was really something," said Kamey, a nurse at Wilmot Memorial Hospital. "We weren't expecting it." Kamey and her family were visiting the mountain during a stormy weather day in early January. The family was walking along a hiking trail that winds through a valley near the top of the mountain. The trail was not heavily traveled and the only other people there were two other families with children. When Kamey and her children saw the color change in the clouds, they knew they had to get pictures. "It was so beautiful, it was really special to see," she said. Kamey didn't know if the rainbow was a sign that more rain was on the way. So the family headed back down the mountain to tell some of their friends and family. "We didn't expect to see it like that. It was just amazing to see it," Kamey said. The Rainbow Connection As many people have learned, rainbows are a combination of sunlight and water. Kamey's cousin, Marisette Wozny-Laughren, said the appearance of rainbows can be seen all over the world. Kamey and her children were just walking in the right area at the right time. Water and sunlight combine to make a rainbow. The colors of the rainbow have meaning. Red rainbows are seen when clouds are reflecting light. When the sunlight hits the top of the cloud and bounces back to earth, a color is returned. White rainbows are seen when the sunlight is directly in the cloud and
