Undeletable, persistent errors can appear in your work if you let an existing layer or document stay open when you close Photoshop. Always save a file when you are finished working on it. I highly recommend you keep all your work open in folders for easy access. For a tutorial guide to the basics of using Photoshop, see the DVD that comes with your copy of Photoshop CS6. These instructions are also summarized in a number of basic, beginner-level articles at www.adobephotoshop.com. If you've never used a graphics software program before, I also recommend that you download the tutorial at www.epson.com. Baking a cake The following sections show how to add text to a layout, use the font and font size tools, and even add drop shadows to text. Creating text effects It's easy to select any text inside your document and apply a style to it. Just follow these steps: From the Home tab, click the Type menu and select a style. (Refer to Figure 1-3.) To adjust the style, click the text or the shape beneath the text, or adjust the style of the text or object under the text. Click the Type Settings icon in the upper-right corner of the window and choose the style or property you want to adjust. You can also access these properties from the Type panel in the Tools Options dialog box. If you want to apply a style to multiple instances of text, select the text by clicking it and press Ctrl+A (⌘-A) to select all instances of text. If you want to apply the same style to all instances of text, you can simply select all the text or, if you're using Illustrator, choose All Text from the Type/Effect drop-down menu and then click the Apply button. I cover all the options for text in the Type panel in the Customization section of this chapter. Photoshop also features the option to outline and fill the selected text. This works well for making text more prominent on a page (see Figure 1-4). **Figure 1-4:** You can give your text different attributes to make it stand out. Adjusting font and font size To adjust the size and appearance of the font, you can use the Type menu shown in Figure 1-3 and the Type panel. You can open the Type panel by clicking the Type Settings

Q: Calling methods on an undefined object using javascript I am trying to write a function that takes in an object and outputs it in a different object, just like this: var myObject = new object() myObject.method1(); How could I do it? A: If you want to access non-public properties, use getOwnPropertyDescriptor, like this: getOwnPropertyDescriptor(obj, "non-public property name").writable Otherwise, just do this: var obj = { publicProperty: true, nonPublicProperty: false, anotherNonPublicProperty: 'hello' }; /* * Copyright 2010 The Closure Compiler Authors. * * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * * * * Unless required by applicable law or agreed to in writing, software * distributed under the License is distributed on an "AS IS" BASIS, * WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. * See the License for the specific language governing permissions and * limitations under the License. */ goog.provide('benchmark.BenchmarkRule'); goog.require('goog.object'); goog.require('goog.testing.jsunit'); goog.require('goog.testing.recordFunction'); /** * The benchmark rule. * @constructor */ benchmark.BenchmarkRule = function() {}; /** * @type {string} */ benchmark.BenchmarkRule.prototype.name; /** * @type {string} */ benchmark.BenchmarkRule.prototype.description; /** * @type {boolean} */ benchmark.BenchmarkRule.prototype.matchNameAndDescription; /** * @type {number} */ benchmark.BenchmarkRule.prototype.timeout; /** * @type {string} */ benchmark.Bench
