Article content While the consumer version of BlackBerry 10 is one of the most anticipated new releases from Research in Motion in nearly a decade, the company still thinks it can count on enterprise customers to keep buying it. On Tuesday, RIM co-CEO Mike Lazaridis sat down with Jeffries analyst Peter Misek at the Deutsche Bank Americas technology conference in New York and made a bold prediction, saying more than 70 per cent of its current base of enterprise customers would still be using BlackBerry 10 in four years, Bloomberg reported. We apologize, but this video has failed to load. tap here to see other videos from our team. Try refreshing your browser, or Lazaridis predicts majority of enterprise users will still be using BlackBerry 10 in four years Back to video "It's the enterprise customers that are looking for the next big move and the change," Lazaridis said, according to Bloomberg. "We have those customers. We've got those large customers. They were the ones in the market that actually bought in and pushed a lot of the expectations we had." It's not entirely clear what his forecast has to do with the consumer BlackBerry — it's the first time the CEO has publicly talked about the product since he said the global launch of the once-iconic device was in danger of slipping. But the fact remains that the company's main customers have been pushing for a different product, and at least some of them are going to be sticking with their orders for the foreseeable future. As soon as Mark Cuban bought the Dallas Mavericks, he was greeted by an awkward question: When do you want to move the team? Now he has the answer: Never. An hour after the 89-year-old billionaire bought his 27th NBA team for a reported \$2.2 billion, Cuban insisted there would be no relocation, in spite of efforts by the NBA to force the move of the Mavs to Seattle. That would be a tougher sell than the prospect of an early-round eviction from the playoffs, as the NBA owners want to move the 2015 All-Star Game from Houston to a western city and one of the first available dates is Jan. 31. "I own the Mavs. I don't want to move the team," Cuban told The Associated Press on Wednesday, shortly after the sale. In the aftermath of his

1. Field of the Invention The invention relates to a carbon anode for a lithium-ion secondary cell. 2. Description of Related Art The practical use of lithium-ion secondary cells has been recently spread in consideration of their high energy density and low weight. In the lithium-ion secondary cell, a carbon anode is housed in a casing, a non-aqueous electrolyte is interposed between the anode and the carbon cathode, and a lithium-metal is housed in the casing. As an active material of the carbon anode, a carbon material such as graphite is generally used, and its capacity is about 372 mAh/g. In recent years, the carbon anode containing graphite as an active material of the carbon anode is approaching the theoretical capacity (372 mAh/g) of its capacity, and a carbon anode having a capacity exceeding the theoretical capacity is being developed. Lithium-ion secondary cells having excellent high-rate characteristics are proposed with using carbon anode having a maximum capacity exceeding the theoretical capacity. For example, Japanese Patent Application Publication No. 2012-8374 proposes a carbon anode comprising a relatively small amount of crystallite graphite having an average particle size of 0.1 μm or less, and a relatively large amount of amorphous carbon formed of a carbon material having an average particle size exceeding 0.1 μm. The amorphous carbon is distributed in the crystallite graphite, and the capacity of the amorphous carbon is used as a capacity reserve of the carbon anode. However, in the carbon anode described in Japanese Patent Application Publication No. 2012-8374, an amount of amorphous carbon is still large, and there is a demand for further improving the capacity of a carbon anode, that the employer was more "in line" with the real cause of the injury; the result is an adverse finding on causation which is arguably unreliable. Similarly, to interpret the 1988 amendment to section 8-25-120 to the present to change the plaintiff's burden of proof, the legislature could have provided that if the plaintiff proved the employer failed to adequately notice the injury, the burden of proving that adequate notice was given to its employer (or its employer's surety) would shift to the employer. When viewed in this fashion, the 1988 amendment to section 8-25-120 can only be read as a provision allowing the plaintiff to prove an injury and subsequently change the burden of proof as
