
Root With Restore By Bin4ry V30 [Extra Quality] Downloadl

[Download](#)

The only visible difference between both versions is v30. Tried to root with Bin4ry but when restoring it failed, it found an old RootMe backup.

Apparently, Bin4ry chose not to do what it could, which is to reconfigure /proc/selinux to only use the current data left over from version 24 and above. I believe this may have happened because bin4ry was updated after version 30 was released, but this has not been confirmed. I have used other tools like X-Tools and they showed exactly the same results. But in any case, I think it's better to just wait for the new official version to come out.
