World Wind KML Viewer Crack Free

World Wind is a World Wind Map Viewer application designed to display the World Wind 3D virtual globe in full-screen mode. There is no installer required to download the program and run it. Simply extract the zip archive to a suitable location on your PC, and open the World Wind Map Viewer.exe file to access the software. You are allowed to choose from several installed maps to view in a fully controlled environment, without any need to register or subscribe to any web site to use the World Wind application. Users are able to select the map area size, as well as the latitude and longitude data to view. With this application you can zoom, scroll and rotate a virtual globe in 360°. World Wind Map Viewer also allows you to see the location and time information, as well as geographical or political boundaries of a selected area of the world. The application features a user-friendly interface that keeps you oriented in a simple, yet powerful environment. Once you launch the program you will be presented with the main screen, which displays a navigation bar on top of which you can see the buttons to zoom in and out, as well as rotate or spin the globe. Right-clicking on the globe will present you with an option to open the info screen, which will

display a map of the selected area, as well as a list of layers that can be hidden or shown at any time. If you click on the Info button, you will find some additional options to zoom in or out, and select the region to be displayed in the application. If you click on the Zoom out button, you will see a button on the navigation bar that opens the options panel, where you can set your preferred view area for a specific latitude and longitude point. The options panel can be accessed by clicking on the button on the navigation bar. If you click on the Compass button, you will see a small compass on the globe, which allows you to control the virtual axis of rotation. When you click on the Play button, you will be able to spin the globe using the mouse. When you are satisfied with the location, just click on the Stop button to stop the rotation of the globe. World Wind Map Viewer features a clean and user-friendly interface that makes the process of exploring the world easier than ever.
