I would like to have a list of the top value (the ones we should buy with the highest discounts) of this group by average worth and market share. I am wondering if you can help me here as I have no idea where to start to be honest. The style should like something like this:

Name	Avg. Worth	Avg. Share	Market Share
EBP: Collier	EBP: Nozière	EBP: Redibaffier	EBP: Romosanta ...

I am open to any suggestions. A: As long as you have `groupby()` on the column that you sort on, you can use `df.groupby(['Name'])['Average Worth', 'Average Share']` to get the average values for each group. If you want to ignore instances of the `groupby()` argument where the name does not exist, you can search for

---

those invalid names in

```
df.groupby(df.Name.fillna("))['Average  
Worth', 'Average Share'] and assign them an  
0 average worth and share, so you don't see  
them. df.assign(Product = df.Name.fillna(""),  
Average_Worth =  
df.groupby(['Name'])['Average Worth',  
'Average Share'] \ .transform(lambda x: 0 if  
len(x) == 0 else x)) \ .dropna() \
```
