One of the most powerful AutoCAD features is the ability to create highly realistic 3D environments. AutoCAD also includes a full-featured 2D drafting environment that is accessible to the novice. User assistance is provided in the form of several helpful guides in both English and Spanish. Although AutoCAD is designed for both the novice and professional, it's most commonly used by CAD users in the 20-45 years old age group. Is there any difference between AutoCAD and AutoCAD LT? AutoCAD LT is a version of AutoCAD that runs on Windows 95/98 and Windows NT platforms. It's a less powerful, less expensive version of AutoCAD designed for smaller enterprises or those that are new to CAD. AutoCAD LT includes tools for 2D drafting and basic 3D modeling, and it's designed for use by non-engineers and non-designers. Features that are missing from AutoCAD LT are more advanced and sophisticated 3D modeling tools, advanced 2D drafting tools, more realistic and intelligent graphics and mathematical functionality. Is there any difference between AutoCAD and AutoCAD 2010? AutoCAD 2010 is a version of AutoCAD that runs on Windows XP, Vista, Windows 7 and Windows 8. It's similar to the version that runs on Windows 2000 and Windows XP, but it includes more sophisticated 3D modeling tools and a new user interface. Applications of AutoCAD: A2D Design is a software application designed for CAD drafters that enables the development of the Windows-based AutoCAD Architecture applications in a multi-window environment. VMTelnet is a tool in AutoCAD that allows you to connect remotely to AutoCAD and perform tasks such as: save drawings, send drawings to a new project and view them in AutoCAD and Remote Tools. The application is also used for designing construction projects. VMTelnet is used primarily by architects. In addition to VMTelnet, Autodesk offers three other applications for architects and others: Virtual Design Center (VDC), Virtual Foundry (VF) and Autodesk Infrastructure Network (AIN). History of AutoCAD AutoCAD 2000 brought a new language called Visual LISP which allows the user to create their own commands and functions using the Visual LISP language. Visual LISP commands are used in all subsequent releases of AutoCAD. Visual LISP was replaced by Visual Basic in AutoCAD 2013. Future of AutoCAD AutoCAD 2018 is the next version of AutoCAD and is expected to be released in 2018. AutoCAD 360 is a next-generation version of AutoCAD which includes a new cloud platform, 3D printing and Virtual and Augmented Reality applications. It is expected to be available in 2019. Since 1992 In 1992, AutoCAD introduced the ability to use the Internet and file transfer protocols. However, the data transfer between a PC and AutoCAD was slow and impractical. In order to improve data transfer speeds, in 1996 AutoCAD introduced local data store, Direct Store Access (DSA), which stores all data on the workstation hard disk. Later, in 2001 the store moved to solid-state drives (SSDs). A more revolutionary change was the introduction of AutoCAD 2002. This release added a user interface that was similar to Windows Explorer, but also included many new features. The interface was known as the built-in graphics user interface (GUI). The 2002 release introduced several changes that have become industry standard. The user interface for windows was replaced by a ribbon interface. When the ribbon is used, the title bar is hidden and only the ribbon is displayed. This interface has been expanded in subsequent releases of AutoCAD. The code-name for the 2012 version was "Release 12.0 5b5f913d15"

The infection rate was relatively low and was comparable to that of nosocomial infection in other locations \[[@CR2], [@CR5], [@CR7]\]. The mortality rate of total patients was 10.2% in this study. The major cause of death was sepsis and its progression. Other causes of death included underlying diseases such as renal failure and trauma. The death rate due to bacterial infection was 5.3% in this study. A report on spontaneous bacterial peritonitis in Japan showed that the major cause of death was spontaneous bacterial peritonitis (68%) \[[@CR15]\]. However, no patient died of spontaneous bacterial peritonitis in the current study. Although we cannot explain the exact reason, the median PD vintage of the patients who died was shorter than those who survived. In addition, the median serum albumin
