If you do work in Photoshop, you will have one or more layers with which you're working. In their simplest form, layers are like drawings on top of each other in a drawing program, such as with Microsoft Paint. You can draw, cut, and paste objects and text (or edit existing items) across multiple layers, then paint a different layer over the existing one to create a new image. Here are some ways to use layers for image editing: Create a tutorial Make a video tutorial Add text to an image, or overlay an image Customize layers Make a tutorial You can create a document and add layer by layer as if it were in a drawing program. There are different ways to do it, but the

simplest is just to click the New button at the bottom of the Layers panel. You'll be presented with a white screen, but you can click the New Layer button and start drawing your new layer. You'll be given the option of background color or white, which is usually appropriate. You can create as many layers as you want in a document. As you add more layers, they'll become visible in a group, and clicking on them can turn off all other layers. Here's how to create a new layer and then switch to it: Click the New Layer button at the bottom of the Layers panel. You'll be presented with a white canvas. Alternatively, you can create a new layer in an existing document using the New Layer from File option at the bottom of the Layers panel. Select New Layer from File Right-click the Layer you want to use.

This opens the New Layer dialog box. Click the New Layer button. You'll get a white canvas. Save an image Photoshop gives you the option to save your image as a new file type, or as a new image. The option is in the Save As dialogue box, usually found by pressing Ctrl+S or File > Save As. You'll get the Save As dialogue box. You can save it as a new file type — creating a new, separate file — or a new image. To save it as a new image, make sure the Image Type option is set to Photoshop (.psd) and that your file extension is.psd. Note: You can easily save a new image from within a Photoshop document, which you can save by pressing Ctrl

Theater and art Hey guys! Finally had a chance to read through and see all the pages of art and comments and what not! Thought I'd say something about how the artwork is going. As the entire comic has been progressed, I have been losing motivation to continue working on it. So, I've been re-watching anime and composing some music. In regards to the art, I've thought of a lot of ideas and concepts. Some of them I've sketched out and gotten really, really far along with, while others I've thrown away or let some days go by. So far I've narrowed my focus to 2 sides - the mafia and the 7 Deadly Sins. I've pretty much sketched out their characters in there entirety (provided for you in the first page), and am working

on bringing them to life in a visual way. The mafia side is going a lot smoother than the 7 Deadly Sins side. So far I've have a few people in mind and some very rough idea's of how they look. The two sides will be a bit different in regards to the development. The mafia side will go from rough drawing to finished inking and coloring the art, while the 7 Deadly Sins side will go from rough sketched concept art to 2d art and then clean-up and coloring. I'm not sure if I will work on both at once or go one at a time. The two sides will feature different aspects of the 2d aspect of the character, depending on what part of it is being worked on. For example, the 7 Deadly Sins characters are normally pretty dark so there will be more of a contrast between their suits and the environments they are put into. Whereas the

mafia characters will be fairly plain so the suits will be prominent in contrast to the environment. For example, I like to see the mask and hood for a mafia character as elements that poke above the eye. Whereas for the 7 Deadly Sins characters, the masks are more intricate and the hoods are harder to see, giving the viewer an interesting view of the character. I'm excited to get all the pages from the first group of characters drawn out and then submit them for the art to be done. Some of the people on this forum have really great skills and have done an excellent job at them, so I hope I can do something similar. If anyone would like to take a look at the sketches for an idea, feel free to either post
