The models were catalogued into a library, the database used.Recently, inexpensive compact cameras which are used as a digital camera included in a personal computer and the like have been widely disseminated. The digital camera is generally available in a format as a complete picture pickup device in which a CCD, a CMOS, or the like is mounted on an optical bench so as to be integrated with an image pickup lens. In order to reduce the dimensions of a digital camera and enable portability, it has been considered that a digital camera is mounted on a portable-computer or a cellular phone. In this case, however, it is necessary to minimize the dimensions of a pickup device in order to reduce the size of the digital camera. Accordingly, it is necessary to set the size of a pickup device so as not to reduce the resolution of a pickup device. As a method of increasing the resolution of a pickup device, for example, there is a method disclosed in Japanese Unexamined Patent Application Publication No. 8-137273. In the pickup device, one in which a CCD and a CMOS are combined in the horizontal direction is obtained by using a vertical CMOS as a transfer section of an output buffer of the CCD. In this method, a CCD region extending in the horizontal direction is divided into a plurality of regions, in which a plurality of the vertical CMOS circuits are disposed, and thus the resolution of the pickup device can be increased. In addition, a method of improving the sensitivity is disclosed in Japanese Unexamined Patent Application Publication No. 8-137275. The method uses a solid-state image pickup device in which a plurality of CCDs are disposed to increase the number of pixels and thus improve the sensitivity. However, in the methods disclosed in Japanese Unexamined Patent Application Publication No. 8-137273 and Japanese Unexamined Patent Application Publication No. 8-137275, respective solid-state image pickup devices having the same number of pixels have been arranged, and thus the resolution of the pickup device has been limited to the number of pixels thereof. Furthermore, in order to make the sensitivity of

The decision to cancel the shows was taken following the Supreme Court's order on Tuesday to maintain the status quo at all places of worship across the country on the grounds of the ongoing lockdown to curb the spread of coronavirus. According to two officials familiar with the development, the chief minister has instructed all his ministers to cancel political programmes scheduled for this week and attend to public welfare activities. On Monday morning, BJP workers went from Delhi to Deoband (near Delhi) and Lucknow to stage a protest. They burnt a campaign banner of BJP'

Ischemic stroke patients with large ischemic infarcts (with extent >8-24 h), causing life-threatening or persistent neurological deficits, remain at high risk of recurrent stroke. Moreover, a more rapid and reliable diagnosis of ischemic stroke is required, allowing the rapid initiation of intravenous thrombolysis. The present study aims to evaluate the safety and efficacy of a novel device - the N.D.Awake!™ - compared with standard-of-care, in the reduction of brain infarct volume and improvement of clinical outcome in this challenging population. Ten patients with symptomatic, large cerebral infarcts (comprising a visible territory infarct >8-24 h prior to admission), were enrolled in the study. All patients were randomized to receive treatment with the N.D.Awake!™ (Group I, n = 5) or intravenous alteplase (Group II, n = 5). Brain MR perfusion-diffusion weighted imaging was performed at 24 h and 72 h post intervention. Neurological deficits were evaluated at 24 h and 72 h post intervention, using the NIHSS (National Institutes of Health Stroke Scale) and mRS (modified Rankin Scale) scales. Both groups demonstrated improvements in the NIHSS (p
