The C Programming language has many data structures like an array, stack, queue, linked list. Q: Sharing files in directories I have an application running on windows 32 bit. Whenever a user runs the application, it reads some parameters. The parameters can be used to specify a path to a file. The file that is specified will be used for saving some information into it by the application. The problem is that I don't know how to specify the folder. It is always a new folder from where the app executes. Sometime it is the c:\ directory (and I use it for read/write files). Sometime it can be the c:\temp (and I use it for read/write files, etc). Sometime the path to a specific file can be in a BIN folder. Sometime it can be a file in a user path (as it is in IE). And it can be anywhere... How can I know where is the user path with full path, what is it with the current directory, and where is the C drive, etc? In general, how can I get the current path of the system with full path? Edit : To get the full path from the command line you can use: C:\Windows>set PATH=%PATH%;%program_files%\path\to\my\file this will set the path in PATH environment variable. I know the file on C:\windows folder exist because I can easily read/write in it, but if my app
