1. Field of the Invention The present invention relates to the field of microcontrollers, and, more particularly, to interfaces to microcontrollers. 2. Description of the Related Art Microcontrollers are integrated circuits used to control many electronic devices. Although many of these microcontrollers may be customized to control specific functions, by design, they are standardized and have a fixed instruction set and functionality. Software is developed to operate these fixed functions and the software may or may not be written specifically for the microcontroller. This is true even of microcontrollers which may be programmed to perform specific functions. More complex fixed functions may be embedded in the fixed function unit of the microcontroller. However, such embedded functions generally cannot be adjusted by software or by different software. For example, basic microcontrollers may have only a single output driver for each input signal. As another example, such basic microcontrollers may include a direct memory access (DMA) or other peripheral function. Although this peripheral function may be programmable, that programming may be used only to set its initial parameters. Once these parameters are set, the peripheral function is fixed. Additional programming is not available to allow the peripheral function to be controlled or enhanced by other software. This is true whether the microcontroller includes a DMA peripheral or an input/output (I/O) peripheral. The fixed instruction set of the microcontroller is not subject to any version control. That is, once a particular version of an instruction set is delivered, this version is delivered as if it were an immutable part of the instruction set. Although some individual instructions may be patched by a software developer, the fixed instruction set is immutable. The version control of the instruction set was originally designed to insure quality control of the microcontroller. As microcontrollers have become more complex, the instruction set has become more complex. Thus, in the past, a software developer would simply add to the instruction set any specific instructions needed to be able to operate the microcontroller. There was no concern that the instructions would be available for future use, or that other software would not be available for use with this "updated" instruction set. As microcontrollers became more complex, the upgrade process became more complex. Thus, the ability of the developer to add and upgrade instructions became limited. In some microcontrollers, the process for upgrading the fixed instruction set was not possible and the instructions were fixed in the microcontroller. Similarly, an update of the microcontroller is restricted to working with the

If you've ever been in a "dance battle," where a bunch of friends jump up on stage to perform, there's a good chance you've used a group of circles on a screen to give that effect. It's a simple method but can look cool when done well. Unfortunately, on the flipside, it can get out of hand and look more like a circle monster than a bunch of friends. To get a handle on the problem, we asked a group of artists on Instagram to share a screenshot of a particularly awesome or clunky circle battle. We picked 10 of the best, plus a bonus shot from designer Han Jae Lee. Don't worry, you'll see more circle battles in this post. Here's the blurb from Han, our artist and designer: We're all growing accustomed to the rhythmic, mechanical nature of many photo apps, and it shows in the way that some apps will get lost in translation when it comes to using circles to sync elements together. We started this whole thing by simply making fun of the most terrible tools – often times the tools we take for granted! I created this circle screenshot collage a few months ago and then lost track of it, but I've been teasing it on my feed for a while so here it is: Image credits: @faznl, @anna_reborn, @anstamme, @daddy_g, @issue, @jasonpaige, @lillien, @littlercg, @lowischool, @nysharper, @sarahyro, @seanwesper, @tempt, @theofapp, @vscapps Photo credits: @faznl, @anna_reborn, @anstamme, @daddy_g, @issue, @jasonpaige, @lillien, @lowischool, @nysharper, @sarahyro, @seanwesper, @tempt, @theofapp, @vscapps Followers:????
