Libretto uso e manutenzione burgman coupe 554 Manuale Uso e Manutenzione. The present invention relates to timing circuits and relates

more particularly to a voltage-controlled capacitor timing circuit with an adjustable buffer storage capacitor. The prior art timing circuits are constructed with digital circuitry.

The digital circuitry must be shifted and/or delayed for setting the proper time and level for each clock pulse. These circuits usually require external programming equipment and special application-specific integrated circuit (ASIC) chips. Such time delay circuits must be provided for each application in order to set the proper time and level of the clock pulses.

It is an expensive problem to set the time delay by programming an external equipment.

However, once the time delay has been set,

the circuit will set the appropriate time and level to start the next cycle. The external programming equipment is not only expensive but also can be inconvenient. It is a long time to program and set the time delay. For the last ten years, the inexpensive micro-processors have been used for controlling the time delay circuits. But, the micro-processors are only suitable for generating the time delay for a short period of time but not suitable for generating long time delays.
